FACTORING POLYNOMIALS. 1) First determine if a common monomial factor (Greatest Common Factor) exists. Factor trees may be used to find the GCF of difficult numbers. Be aware of opposites: Ex. $(a-b)$ and $(b-a)$ These may become the same by factoring -1 from one of them.

In Algebra 1, students rewrote (factored) quadratic expressions as the product of two linear factors. This helped them learn about the behavior of quadratic functions. In Algebra 2, we extend this idea to rewrite polynomials in degrees higher than 2 as products of linear factors. This will help us investigate polynomial functions. It also allows us to prove polynomial identities, which are ...

The intercepts at $x = -7$ and at $x = -3$ are clear. The intercept at $x = 1$ is clearly repeated, because of how the curve bounces off the x-axis at this point, and goes back the way it came.. Note: This polynomial's graph is so steep in places that it sometimes disappeared in my graphing software. I had to fiddle with the axis values and window size to get the whole curve to show up.
