Before you get any further you should set your site name. When you start a new Liferay bundle for the first time, it creates a site with a single “Welcome” page. The default name for the Site is “Liferay,” but you can change that by changing the name globally. You can set the name through the Setup Wizard or through the Control Panel.

Initial Setup - Liferay Help Center

The setup wizard behind the scenes creates a configuration file that you can create manually. Create a text file called portal-ext.properties in your Liferay Home folder. This file overrides default properties that come with Liferay. The first setting you'll override is the default configuration that points Liferay to the embedded HSQL database.

Manual Configuration - Liferay Help Center

If you're setting up Liferay to be an actual server, copy your database's JDBC driver .jar to [Tomcat]/lib/ext (see the setup wizard section below). If you're setting up Liferay for demo purposes, you can skip this step. Start Tomcat in the same way as you would if you had downloaded it manually.

Installing a Bundle - Liferay Help Center

Build your project on the community supported Liferay Portal CE which is designed for smaller, non-critical deployments and contributing to Liferay development. Liferay Commerce Build your commerce project with a suite of B2B and B2C features built from the ground up.
