That can lead to a decrease in the flow of blood to your heart muscle, keeping it from getting the oxygen it needs. The disease usually starts as a result of atherosclerosis, a condition sometimes...

Heart Disease: Types, Causes, and Symptoms

The coronary arteries supply blood, oxygen and nutrients to your heart. A buildup of plaque can narrow these arteries, decreasing blood flow to your heart. Eventually, the reduced blood flow may cause chest pain (angina), shortness of breath, or other coronary artery disease signs and symptoms. A complete blockage can cause a heart attack.

Coronary artery disease - Symptoms and causes - Mayo Clinic

Americans at Risk for Heart Disease As plaque builds up in the arteries of a person with heart disease, the inside of the arteries begins to narrow, which lessens or blocks the flow of blood. Plaque can also rupture (break open). When it does, a blood clot can form on the plaque, blocking the flow of blood.

Heart Disease Facts | cdc.gov

Coronary artery disease and heart attack. Coronary artery disease is the most common form of heart disease and the most common cause of heart failure. The disease results from the buildup of fatty deposits (plaque) in your arteries, which reduce blood flow and can lead to heart attack. High blood pressure (hypertension).

Heart failure - Symptoms and causes - Mayo Clinic

Atrial fibrillation is an irregular and often rapid heart rate that can increase your risk of strokes, heart failure and other heart-related complications. During atrial fibrillation, the heart's two upper chambers (the atria) beat chaotically and irregularly — out of coordination with the two lower chambers (the ventricles) of the heart.
