The current situation in ECE4760 PIC32 developers is that there is a lack of library for them to directly access the file stored in an SD card. To enhance the feasibility and capability of the use of PIC32, a SD card library is needed to be created. Therefore, the developers are able to read, write or update information in the system directly.

I use Elm Chan FatFs filesystem library. Its on a PIC32 project, but its used for the bootloader, so size is important. The library is configurable for size vs features. On a PIC32 it takes about 10K for read only, 12K for read/write, the other features are directories and long filenames, both take more memory, not sure how much.
